   b. more than 30 years.
   c. 15 years.

SECTION 2: READING (30 Marks)

Read the passage below and answer the questions that follow.

Are you Dependent on Technology?

1. Technological advances have made our lives easier and more comfortable, but when we use them constantly, it has a negative **impact** on our creativity. In other words, we don't use our brain as often as we should. For example, how often do you use a search engine to find out information you should know, but you've forgotten? I do it all the time. And I used to buy a newspaper every day, but I read online news now. I think I'm probably a digital **addict**, in fact.

FRAN, NEW YORK

2. Well, I'm a Math teacher and I've noticed that kids can't do even the most **basic** sums in their heads anymore, because they are so dependent on technology. I mean, I think the internet can be an excellent educational tool, but kids don't go to the library to consult an **encyclopedia** these days. And the English teacher at school told me that students don't read a whole book now. They only read a summary of it on the internet. So, I think we should control how much time children spend using technology.

BARRY, DUBLIN

3. In our modern workplaces, people use all kinds of electronic devices to do their jobs more productively. But people shouldn't send messages by email or phone each other when they are sitting in the same office. A face-to-face conversation with a colleague is quicker and more efficient. Also, I worry that robots will soon do all our jobs or simplify them. I think it's time to hit the **panic** button and say enough! People are happier when life is simpler.

CARMEN, BARCELONA

4. We should certainly spend less time on social media and apps - this is true in my house at least. Just the other day, my son sent me a message from his bedroom telling me what he wanted for dinner! That was a red flag for me! Spending time with family always seems to **involve** electronic devices, and that's not good for family relationships. So, we've made a rule now that when we are eating, my children have to leave their phones in their rooms. I think it's important that we talk about our days with each other.

ALED, CARDIEF

PART 2

READING (30 Marks)

Read the passage below and answer the questions that follow.

ROBO-WORKERS

1. According to a 2017 report from McKinsey Global Institute, between 400 million and 800 million people could lose their jobs by 2030. McKinsey predicts that as technology improves, some tasks will be done more quickly or cheaply by machine, so businesses will install robots or computer programs to do them. That means there will be less work for human employees. Many people could lose their jobs or have **trouble** finding new ones. "There's going to be a big disruption in the next 10 or 20 years," says Martin Ford. He is an author and **futurist**: He studies trends and makes predictions about the future.

2. Some jobs are more likely to be automated* than others. Machines can do jobs that have three characteristics: They are routine, predictable and **repetitive** - "It's the kind of job where you come to work and work on the same kind of thing again and again," Ford says. "What you do each day is not too different from what you've done in the past." According to the McKinsey report, some of these jobs pay low **wages** and require little education. But others pay well and demand an advanced college degree. Taxi drivers, cashiers, lawyers, and doctors all perform some tasks that can be done by machines.

3. So what jobs are safe from automation? The answer is; "Anything where you're thinking outside the box and coming up with new ideas," Ford says. "Or work that involves interacting with other people, having empathy, and building relationships." Jobs like engineer, scientist, artist, therapist*, and nurse are examples.

4. At Creator, the world's first entirely robot-crafted burger company, the CEO Vardakostas **hired** people to do just that kind of work. Instead of repetitive burger prepping, workers perform tasks that cannot be done by the machine. They **interact** with customers and advise them on flavor pairings, like mushroom sauce with pickles and onion jam. "In our world at Creator, all the work is creative and social," Vardakostas says. "And I think that is what we're going to see more of in the future."

*automated: *using machines or software to do tasks without people.*
*therapist: *A therapist is someone who helps people with their feelings and mental health.*
