Write an article in **100-120 WORDS** to describe the daily routine of someone you know who has **unusual job.** In your article include:

5 Model Article (110 words)

A real example

A Day in the Life of an Orangutan Babysitter

My aunt has a great job at an orangutan sanctuary. She's the daytime babysitter for a five-month-old orangutan called Coco. Coco's mother died, so they need to take care of her 24 hours a day. When my aunt arrives in the morning, she gives Coco milk in her bottle and changes her nappy. She does this several times a day. Then she works as Coco's teacher, teaching her the skills she needs for living in the forest, such as climbing. Coco likes climbing up, but not down! She screams for my aunt's help sometimes. My aunt hugs her when she gets scared. In the early evening, it's Coco's bedtime, and their time together that day is over. My aunt puts Coco to bed and goes home. My aunt says, 'I love Coco, and I love my job!'

5 Model Article (110 words)

A real example of an unusual job!

Under the Waves: A Day in the Life of an Underwater Archaeologist

My job as an underwater archaeologist is a mix of adventure, science and history. I spend my days exploring the ocean floor, searching for sunken ships, ancient objects and lost cities. I need special training in diving, navigation and archaeology. Every day, I wear diving gear, use underwater cameras and sonar to find and record artifacts. I also work with a team of experts, including historians and marine scientists. My job is challenging, but it is exciting and rewarding. I love discovering pieces of the past and helping to protect underwater heritage for future generations.

5 Model Article (110 words)

A real example of an unusual job!

A Day in the Life of a Planetary Scientist

My job as a planetary scientist is full of adventure and discovery. Every day, I study planets, moons and other celestial bodies. I use telescopes and space probes to collect data and analyse rocks, soil and atmosphere samples. I work with scientists and engineers from different countries to learn more about our solar system and the universe. Sometimes I spend long hours in the lab, and other times I plan missions to space. I need a strong interest in science, good problem-solving skills and patience. Being a planetary scientist is not just a job; it's a chance to explore the unknown and help protect our planet and the future of space exploration.
