Plan

Introduction:

- Space technology is a very innovative field that has been achieving many advances through the past years.

Body:

Paragraph 1:

Space technology has achieved a lot in the last years.

- Launching the satellites TOPEX/Poseidon and Jason-1.
- Launching the two satellites called GOES.

Paragraph 2:

Thanks to space technology we use satellites for many things in our life.

- Telephone calls
- Television signals
- Navigation
- Studying our planet

Conclusion:

- In short, space technology is a very amazing field that works for saving us and our planet.

Topic

Space Technology

Space technology is a very innovative field that has been achieving many advances through the past years. The advances that space technology achieves are very helpful for us and for our planet. We have been benefited a lot from space technology. In my essay I will present some of the advances that have been achieved by space technology and show how those advances have benefited humanity.

Space technology has achieved a lot in the last years. It has been one of the most growing scientific fields. One of the advances that space technology has achieved is; launching the two satellites: TOPEX/Poseidon and Jason-1, those satellites have been studying the oceans, and they have helped us understand the very complex movement of ocean water and make long-term weather predictions. Another advance of space technology is; launching the two satellites that are called GOES which let us track hurricanes and other storms as they develop.

Thanks to space technology we use satellites for many things in our life. Such as: transmitting telephone calls and television signals, and for satellite navigation systems. Also space technology has helped us to understand and take care of our planet. The satellites have studied oceans, clouds, the atmosphere, weather, deserts, rain forests, cities, farmlands, ice sheets, and everything on earth. Satellites are as well used to predict the weather. We are not able to change the weather, but having an idea ahead of time gives us the chance to prepare for different weathers and conditions.

In short, space technology is a very amazing field that works for saving us and our planet. It makes us develop and know more about our world. Space technology should be supported from governments and should keep growing for the sake of humanity.
