B- Reading comprehension

Read the following passage, then answer the questions below.

Global warming is a big problem of the atmosphere of the Earth which causes constant rise in the temperature. Scientists say that in the next fifty to one hundred years the temperature of the Earth will increase to a dangerous level which will create a big problem regarding living on Earth.

There are many effects of global warming. These effects are increasing day by day and creating danger for human life. First, the weather is becoming hot. The hottest year on Earth was 2016 which was 1.78 degrees warmer than the average across the entire 20th century. Second, ice in the North and South Poles are melting gradually which **increases** the sea level. As a result, many islands around the world will be covered with sea water in the next fifty years. Third, many species of animals are already moving their habitats to the north where the weather is cooler.

Global warming has many causes. **It** is primarily a problem of too much carbon dioxide in the atmosphere which acts as a cover trapping heat and warming the planet. Another cause is the burning of fossil fuels such as oil, coal and natural gas for energy. Using pesticides and fertilizers can increase the problem by releasing other global warming gases into the atmosphere.

Last but not least, all governments and countries should work together to reduce the effects of global warming by reducing air pollution, cleaning the Earth and finding other renewable sources of energy which could clean the atmosphere of the Earth.

B- Reading Comprehension

Read the following passage, then answer the questions below.

The Internet is a great place to look up information. The same information may be found in libraries, but the Internet makes this information available 24 hours a day. Furthermore, information on the Internet may be up-to-date, and some would never be found in a library. The Internet is not a replacement for libraries, but **it** is an extremely valuable supplement.

When you are connected to the Internet, you are ready to start searching. The basic steps for finding what you are looking for in a fast and easy way are four. First, find a search engine. A search engine is useful tool for looking up information on the Internet. Basically it is an Internet site that will do the searching on the Internet for you. There are many search engines and websites for you to use. Second, key in the words. All you have to do is type the topic you are looking for in the areas selected for your topic and let them do the work. The search engine will select the top ten websites they found for you.

Third, look at the search results. The search program will show you a page of sites which takes you to another page related to your **query**. Fourth, get more advanced. Simple searches are fine, but if you are after specific information, scroll down to the bottom of your search results and click the text which says "All Search Options" it will let you search for more specific categories like pictures, sounds and music files.

Read the following passage, then answer the questions below.

Today, mankind is living in danger. It appears that we have come to the end of our journey. The Earth, the only home we have, has become a dangerous place. It may explode into pieces at any moment.

Man has been living on Earth for thousands of years. **It** has been giving him everything he needed. Now, it has become dangerous because of many harmful scientific inventions.

Unfortunately, science which provided many solutions to human problems has brought more fear and danger than hope and comfort. At first, it appeared to be the greatest friend and helper of man. It helped in curing many diseases and it promised to end hunger and poverty and change this planet into paradise.

But what has it actually accomplished? It has eliminated the difficulties of life. Man still suffers in some parts of the world from poverty, famine death and destruction. It is true that science has brought many comforts to man and has made life easier. However, this gift was poisoned by evil and greedy spirits of those selfish men of mankind. The advanced powerful nations exploit and the weaker countries. Also, science has developed such weapons of mass destruction that in the next world war not a single human being will escape death. Now science has invented weapons that can blow up the Earth in few hours.

One has to admit that science is a double- edged weapon. If it is directed to the welfare of life, it will be a blessing, otherwise it will be a **catastrophe**.

B – Reading Comprehension

Read the following passage then answer the questions below:

If you have ever confidently walked into a room only to forget why you went there in the first place, then you will understand that human memory is full of surprises. We seem to forget important information yet remember thousands of daily details we will never need. Why is this the case?

There is no limit to the amount of information you can remember. Given how much we seem to forget on a daily basis, it may seem **strange** but it is completely true that our brains have an essentially unlimited storage capacity for learning. A rough calculation by Paul Rober, a professor of psychology suggests that our brain can store 2,500,000 Gigabytes. So if we have an unlimited storage capacity, why do we still forget too much? A lot of evidence suggests that we are more likely to remember something if we make an active effort to understand it, and if we encounter it regularly- as this strengthens the connection between neurons in the brain and makes information easier to remember.

It is easy to think of our brains as kind of digital recorder for information which can turn on and off when we are reading, listening or watching something. Unfortunately, human memory doesn't work like that. Information related to the memory are stored in the area of the brain they first came in. Visual information stay in one area, listening information in another, familiar names go to another and so on.

A. Choose the best answer from a ,b ,c and d:

B – Reading Comprehension

Read the following passage then answer the questions below:

Floods are regarded as the most common of all disasters. They take place everywhere in the world, resulting in widespread damage or even death. As a result, scientists have long tried to predict floods. There are many conditions, from deep snow on the ground to human error, that cause flood.

When deep snow melts it creates a large amount of water. When it **occurs** together with heavy rain and sudden warmer weather it can lead to serious flooding. Melting snow also contributes to high water levels in rivers and dams. Whenever rivers are already at their full capacity of water, heavy rain will result in the rivers flooding. Rivers that are covered with ice can lead to flooding. When ice begins to melt the surface of the ice cracks and breaks into large pieces. These pieces of ice move and float down the river. They can form a dam in the river, causing the water behind the dam to rise and flood the land.

When a large human-made dam breaks or fails to hold water collected behind it, the results can be devastating. Dam waters can travel tens of kilometres and cover the ground in metres of mud and water.

Although scientists can't always predict exactly when floods will occur, **they** do know a great deal about when floods are likely, or probably, going to occur. Deep snow, ice-covered rivers and weak dams are all strong conditions for potential flooding. Hopefully, this knowledge of why floods happen can help us reduce the damage they cause.

B – Reading Comprehension

Read the following passage then answer the questions below:

“Stop the world, I want to get off!” This sentence refers to the feeling of stress that makes the person want to stop whatever they are doing. Try to relax and become calm again. Stress means pressure or tension. Too much stress results in physical, emotional and mental health problems.

There are numerous physical effects of stress. Stress can affect the heart. **It** can increase the pulse rate, make the heart miss beats and can cause high blood pressure. Stress can cause a person to breathe fast. Stress can affect the stomach. It can cause stomach ache. And problems digesting food.

Emotions are also easily affected by stress. People suffering from stress often feel anxious. They may feel **tired** all the time. When people are under stress they often overreact to little problems. Stress can make people angry, moody or nervous. For example, a normally gentle parent under stress at work may hit a child for dropping a glass of juice.

Long term stress can lead to a variety of mental problems. Depression, an extreme feeling of sadness and hopelessness, can be the result of continued stress. If stress is allowed to continue, then one’s mental health is put at risk.

It is obvious that stress is a serious problem. It attacks the body. It affects the emotions. Untreated, it will result in mental illness. So, reduce stress: stop the world and rest for a while.
