The Microwave Oven

The microwave oven is a common appliance that is used in kitchens all around the world today. Many people are so used to using a microwave that they have forgotten about all of the advantages the microwave has given to cooks. Before the microwave was invented, people spent a lot more time in the kitchen! The microwave was invented by a scientist named Percy Spencer in 1945. Spencer was working on a machine called a magnetron that produced microwave radio signals for radar systems. One day, Spencer had a chocolate bar in his pocket that he was saving to eat for a snack later. While he was standing next to the magnetron, he noticed that the chocolate bar was melting in his pocket. He realized that the microwaves had melted it. He did more tests, using popcorn and eggs before he realized that he had just discovered a new, very useful way of cooking. The first microwave oven weighed about 700 pounds (318 kilograms) and was about five feet (152 centimeters) tall. It was about the size of a refrigerator! But, with time and more experiments, the microwave became much smaller and is now used in kitchens everywhere.
